

CLAIMS

I claim:

1. A steering wheel high beam switch, comprising:

a steering wheel for a vehicle having a front face and a back face, at least one recess provided in the back face of said steering wheel;

a high beam switch positioned within said at least one recess, said high beam switch having three terminals

wiring passing through said steering wheel for operatively connecting a first terminal of said high beam switch to one terminal of a headlight switch, operatively connecting a second terminal of said high beam switch to low beams of said vehicle, and further operatively connecting a third terminal of said high beam switch to high beams of said vehicle and an indicator light on a dashboard display of said vehicle.

2. The steering wheel high beam switch according to claim 1, further comprising:

a second high beam switch positioned within a second recess, said second high beam switch having three terminals;

said wiring also provides for operatively connecting a first terminal of said second high beam switch to said one terminal of said headlight switch, operatively connecting a second terminal of said second high beam switch to said low beams of said

vehicle, and further operatively connecting a third terminal of said second high beam switch to said high beams of said vehicle and said indicator light on the dashboard display of said vehicle.

3. The steering wheel high beam switch according to claim 1, wherein said high beam switch is a push button switch.

4. The steering wheel high beam switch according to claim 1, wherein said high beam switch is a toggle switch.

5. The steering wheel high beam switch according to claim 1, wherein said high beam switch is a contact switch.

6. The steering wheel high beam switch according to claim 1, wherein said high beam switch is a sliding switch.

7. The steering wheel high beam switch according to claim 2, wherein said high beam switches are push button switches.

8. The steering wheel high beam switch according to claim 2, wherein said high beam switches are toggle switches.

9. The steering wheel high beam switch according to claim 2, wherein said high beam switches are sliding switches.

10. The steering wheel high beam switch according to claim 2, wherein said high beam switches are contact switches.
